Our new software will allow the integration of "Sports Radar" to display bowling speeds on the LCD screen next to the bowlers name.

ABOUT DATASCORE

Datascore Technologies Pty Ltd evolved as a joint venture between Codersoft Pty Ltd and Yellowball Investments Pty Ltd. Codersoft Pty Ltd specialise in developing software for end-users, and Yellowball Investment Pty Ltd have a strong background in the development and operation of Indoor Sports Facilities.The aim was to produce a world class scoreboard package that catered for a multiple of sports which was able to produce a visually stunning LCD display for participants and spectators to enhance their sporting experience, as well as output meaningful statistical data in a hardcopy form after the game for sports such as cricket which traditionally rely on statistics. This combined with a touch screen ease of operation for Umpires and Referees ensures an efficient and exciting experience for all.

FEATURES:

For Players:
TEAM & PLAYER NAMES listed on the scoreboard LCD screen with ball by ball recording for Indoor Cricket allows each individual to follow their progress. Then at the end of the game a Player Game Report enables each player to receive a detailed breakdown of their game stats as well as Team graphs and statistics.

For Officials:
Simple touch screens mounted in the umpires stands and hand held remote devices for on court umpires in sports such as soccer and netball make scoring paperless for staff. Management have the ability to change background and scoring colours and team name fonts to suit their own tastes and environment to give each scoreboard package an "individual" look.

For Spectators:
Advanced animations combined with the ability to customise TEAM NAMES and TEAM COLOURS onto the large LCD scoreboard with the touch of a button ensure spectators can easily follow the action on any court.

PLAYER GAME REPORTS

Player Game Reports are available for Indoor Cricket and Soccer which provides each participant with a detailed breakdown of their game stats as well as game graphs for their team. Graphically the information is produced in a variety of formats for each player, with all Player Game Reports being archived and available on the Datascore website for players to print out from home at their leisure.

SPORTS

Due to the ability of Stadium Managers to customise their game formats the Datascore Scoreboards can be used for almost any sport. With current graphic libraries catering for CRICKET, NETBALL, SOCCER, TENNIS, BASKETBALL and VOLLEYBALL.

Scoreboards can have active timing, skins scoring formats and many other combinations all set by the operator.
